Trans. of mono. Aerozoli v Sovetskom Khozyaystve, Moscow, 1956, p. 9-18

An examination is made of condensation on non-soluble nuclei and on nuclei soluble in a liquid. It was found that, for polar substances on even surfaces the vapor adsorption isotherm cuts the vapor tension isotherm, and new liquid phase formation occurs in certain instances by an intermittent process of two-dimension nucleus formation. The liquid phase forms a marginal angle distinct from zero. The mechanism of vapor condensation on incompletely wetted particles was analyzed and it was found that the introduction of vapors of certain organic liquids may change the (over)
